- Excessive fluid in pleural cavity, b...
...ed in a separate pleural membrane
...of accumulation of fluid

COPD

* Emphysema

Air pollution (environment/ occupational)

smoking
↓
↑ elastase
(breaks down fibers so less recoil of lung)

α1 antitrypsin * mutation
↓
can't stop proteases from destroying alveoli

↓

INFLAMMATION

↓

fibrosis + thickened bronchial walls
- ↓ elasticity

↑ mucus production
can't expire

infections
cough

NARROW AIRWAYS
can't expire

wheeze
accessory muscles

↓ breath sounds

pursed lip

air trapping
overinflation
↑ AP diameter
hypercapnia

hypoxic drive to breathe

* alveolar damage
- ↓ surface area for gas exchange
- ↓ capillaries
- large airspaces

HYPOXIA

clubbing
fatigue
confusion

↓

vasocxn

polycythemia

↓

pulm HTN
cor pulmonale

dysrhythmias
RHF S/S
