1 Multiple Answer

When caring for a client with cervical cancer who has an internal radiation implant, the nurse would observe which principles? Select all that apply.

- [x] Placing the client in a private room with a private bath
- [x] Wearing a lead shield when providing direct client care
- [ ] Limiting the time with the client to 1 hour per shift
- [x] Keeping pregnant persons out of the client's room
- [ ] Removing the dosimeter film badge when entering the client's room
- [ ] Allowing individuals younger than 16 years old in the room as long as they are 6 feet away from the client

Feedback

General Feedback

Answers: pregnant people out, private room, lead shield

2 Fill in the Blank

The nurse cares for a client admitted for a COPD exacerbation. The client's baseline oxygen saturation is 90% on 2L NC. The client suddenly feels short of breath and has inspiratory and expiratory wheezes present. Oxygen saturation is now 87% on 2L NC. Select if each potential action is indicated, unnecessary, or contraindicated for the client.

Action: Increase oxygen flow rate to 6L NC. contraindicated

Action: Encourage pursed lip breathing. indicated

Action: Elevate the head of the bed. indicated

Action: Request STAT arterial blood gas (ABG). unnecessary

Action: Perform 12-lead EKG. unnecessary

Feedback

General Feedback

Answers: increase O2 - contraindicated

Pursed lip - indicated

elevate HOB - indicated

STAT ABG - unnecessary

EKG - unnecessary

3 Multiple Answer

The spouse of a non-verbal client with metastatic cancer asks the hospice nurse, "How will I know when pain medication is needed? I'm afraid to give him too much of the liquid morphine." The nurse teaches the spouse to look for which signs that indicate pain?

- [x] Shallow breathing
- [ ] Eating less
- [x] Acting restless
- [x] Frowning or grimacing
- [ ] Awake more often

Feedback

General Feedback

Answer: grimacing/frowning, restlessness

4 Multiple Choice

The nurse is caring for a hearing-impaired client. Which approach will facilitate communication?

- (●) Speak with a low tone of voice
- ( ) Speak quickly
- ( ) Speak directly into the impaired eaer
- ( ) Speak very loudly

Feedback

General Feedback

Answer: low tone

5 Multiple Choice

The nurse is instructing a hospitalized client with a diagnoses of emphysema about measures that will enhance the effectiveness of breathing during dyspneic periods. Which position would the nurse instruct the client to assume?

- ○ Side-lying in bed
- ◉ Sitting up and leaning on an overbed teable
- ○ Sitting up in bed
- ○ Sitting in a recliner chair

Feedback

General Feedback

Answer: sitting up and leaning on overbed table (tripod)

6 Multiple Choice

The nurse is performing tracheostomy suctioning for a client with coarse crackles on auscultation. The suction catheter is inserted until resistance is met, but no secretions are obtained when suctioning is applied while withdrawing the catheter. Which action does the nurse take next?

- ○ Offer small sips of water before repeating suctioning
- ◉ Withdraw the catheter slightly to reposition and attempt suction again
- ○ Stop suctioning and document that no secretions were removed
- ○ Increase suction pressure while reinserting the catheter

Feedback

General Feedback

Answer: withdraw slightly to reposition and attempt again

7 Multiple Choice

Which member of the interdisciplinary care team would be responsible for visiting the client during hospitalization to determine financial barriers to care?

- ○ Physician
- ○ Primary RN
- ○ Case manager
- ◉ Social worker

Feedback

General Feedback

Answer: social work

8 Multiple Choice

A home health agency will begin services for four new clients. During the initial team meeting discussing client needs, what client would have the greatest risk for falls?

- ○ A 45-year-old male with a mild concussion
- ○ A 51-year-old female with positional vertigo
- ◉ A 68-year-old female with Parkinson's disease
- ○ A 75-year-old male with hypertension

Feedback

General Feedback

Answer: Parkinson's

9 Multiple Answer

Which of the following unexpected events are considered sentinel (never) events? Select all that apply.

- ☑ A client falling while walking in the hallway that resulted in a subdural hematoma

- [ ] Reviewing a surgical consent stating the client is to have a right cataract surgery, when the patient states it is the left
- [ ] A client falling out of bed with no injuries sustained
- [ ] Finding a wrong medication stocked in a pyxis drawer
- [x] Going back to a client's room and discovering the IV piggyback infusion was clamped and the medication was still in the bag when it was time for the next dose

Feedback

General Feedback

Answers: IVPB (med error; missed dose) and fall with SDH (fall occurred with injury)

10 Multiple Choice

The emergency department (ED) nurse receives a telephone call and is informed that a tornado has hit a local residential area and that numerous casualties have occurred. The victims will be brought to the ED. The nurse would take which initial action?

- ○ Prepare the triage rooms
- ○ Obtain additional nursing staff to assist in treating the casualties
- ○ Obtain additional supplies from the central supply department
- ◉ Activate the emergency response plan specific to the facility

Feedback

General Feedback

Answer: activate the emergency response plan

11 Multiple Choice

The primary RN is precepting a new graduate nurse. They are caring for a 13-year-old client with epillepsy. Which of the following actions by the new graduate nurse requires a need for further education?

- ○ The new graduate nurse ensures there is an oxygen flow meter on the wall and an AMBU bag at bedside

- [x] The new graduate nurse leaves the suction canister unattached to the wall suction
- [ ] The new graduate nurse leaves the bed in the lowest and locked position
- [ ] The new graduate nurse places blankets around the side rails since no seizure pads were available on multiple units

Feedback

General Feedback

Answer: suction unattached

12 Multiple Choice

The nurse is reviewing a plan of care for a client with an internal radiation implant. Which intervention, if noted in the plan, indicates the need for revision of the plan?

- [ ] Keeping all linens in the room until the implant is removed
- [x] Placing the client in a semiprivate room at the end of the hallway
- [ ] Wearing a lead apron when providing direct care to the client
- [ ] Wearing gloves when emptying the client's bedpan

Feedback

General Feedback

Answer: semiprivate room

13 Fill in the Blank

A child suddenly vomits. The nurse takes actions to ensure safety. For each nursing action, select the associated rationale for that action. A rationale choice may be used more than once.

Action: Position the client upright or on the side.

This allows the child to maintain a patent airway

Action: Perform oral suctioning.

This allows the child to maintain a patent airway

Action: Assess character and amount of vomitus.

This will provide information about possible causes of the vomiting episode

Action: Assess the force of the vomiting.

This will provide information about possible causes of the vomiting episode

Action: Monitor intake and output and vital signs.

This will be helpful in monitoring for complications of the vomiting episode

Feedback

General Feedback

Answers: 1&2 - patent airway; 3&4 - cause of vomiting; 5 - monitor complications

14 Multiple Choice

The nurse cares for an intubated client following surgery. The client begins to wake up from anesthesia and reaches for the endotracheal (ET) tube. After stopping the client from pulling the tube, which action does the nurse perform next?

- ○ The nurse calls the healthcare provider and requests an immediate prescription for wrist restraints
- ● The nurse explains the reason for the ET tube to the client
- ○ The nurse applies mitten restrains and observes the client every 15 minutes
- ○ The nurse asks the client's family to sit with the client and supervise behavior

Feedback

General Feedback

Answer: explain reason for tube (least restrictive first!)

15 Multiple Choice

Which of the following clients demonstrates sensory overload?

- ○ A client that has the room lights off and blinds closed
- ○ A client that uses hearing aids
- ● A client that is restless and agitated in bed
- ○ A client that is able to sleep with minimal night wakings

Feedback

General Feedback

Answer: restless and agitated

16 Multiple Choice

The home health care nurse is caring for a client with cancer who is complaining of acute pain. The most appropriate determination of the client's pain needs to include which assessment?

- ○ Nonverbal cues from the client
- ● The client's pain rating
- ○ Pain relief after appropriate nursing intervention
- ○ The nurse's impression of the client's pain

Feedback

General Feedback

Answer: client's pain rating. Fancy way of asking what do you document for pain, and that is whatever the patient says! (Not what you think!)

17 Multiple Choice

The nurse is conducting preoperative teaching with a client about the use of an incentive spirometer. The nurse needs to include which piece of information in discussions with the client?

- ○ After maximum inspiration, hold your breath for 15 seconds and exhale
- ◉ The best results are achieved when sitting up or with the head of the bed elevated 45 to 90 degrees
- ○ Keep a loose seal between the lips and the mouthpiece
- ○ Inhale as rapidly as possible

Feedback

General Feedback

Answer: sit up/HOB 45-90 degrees

18 Multiple Answer

The home health nurse enters the client's home after the client was recently started on home oxygen. The client has a history of COPD. Which of the following findings in the home indicate a need for further education? Select all that apply.

- ☑ There are ash trays throughout the house with used cigarettes in them
- ☑ The extra oxygen tanks are stored in a closet lying down
- ☑ The client states he turns up his oxygen to 6L when he is dyspneic
- ☐ The client states he does not use the gas stove anymore

Feedback

General Feedback

Answers: ash tray, 6L, and tanks lying down

19 Multiple Choice

The nurse obtains a prescription from a primary health care provider to restrain a client and instructs an assistive personnel (AP) to apply the safety device to the client. Which observation of

unsafe application of the safety device would indicate that further instruction is required for the AP?

- (●) Safely securing the safety device straps to the side rails
- ( ) Applying safety device straps that do not tighten when force is applied against them
- ( ) Securing so that two fingers can slide easily between the safety device and the client's skin
- ( ) Placing a safety knot in the safety device straps

Feedback

General Feedback

Answer: securing to the side rails; restraints should always be secured to a non-mobile part of the bed

20 Multiple Choice

The nurse is preparing to initiate an IV line containing potassium chloride using an IV infusion pump. While preparing to unplug the pump cord into the wall, the nurse finds that no outlet is available in the wall socket. The nurse would take which action?

- ( ) Initiate the IV line without the use of a pump
- ( ) Use an extension cord from the nurses' lounge for the pump plug
- (●) Contact the electrical maintenance department for assistance
- ( ) Plug in the pump cord in the available plug above the room sink

Feedback

General Feedback

Answer: contact maintenance
